## Committing Myself to Challenges

"I didn't choose my major but my major chose me." This is the answer for those who asked me why I study engineering in HKUST. When I was in middle school, I wanted to be a politician to make a better world. I didn't want to be silent and integrated myself with computers in a laboratory. Under no circumstances should I become a nerd sitting in front of the machines and debugging the programs. I didn't think I can survive the studies when I realized I was admitted into the computer science program. It is true that the computer science curriculum is well-packed; it is true that my classmates perform really well; it is true that I have zero interest about programming. But later on, I just realized my worries are pointless.

My perceptions to HKUST and engineering have a 180-degree change as I started on my studies here. In HKUST, there are many chances to talk to professors directly. Talking to them, I know more about what is engineering. I have been misunderstanding this term "computer science" for ages. Computer science is all about how to make things possible and how to solve the practical problems in society. It is highly related to the life of human beings. Apart from that, my classmates are willing to extend a great hand to me when I am facing difficulties in school work. HKUST gives me many challenges. But at the same time, it is a place that sheds me a whole new way to see things and teaches me to hurdle those predicaments.

I want to share my little tiny story to people who want to commit themselves to challenges as well.

This is Terry, now in my third year studying Computer Engineering and Business Management. I very much treasure the four years in HKUST. I truly feel the university's effort in nurturing its students. In the past two years, HKUST offered me two major benefits, academic excellence and global exposure.

**Academic Excellence:**

It is not rare to see our professors on newspaper because of their excellent research work. Feeling their passion in different domains of study, we never hesitate to ask questions and discuss with them in class. They are interested in any questions raised and take them very seriously to make concepts clear to students. Their respect towards knowledge is very impressive to me, driving me to discover more in my studies.

**Global Exposure:**

HKUST offers me an opportunity to study abroad. Now I am studying in the United States for one semester (Fall semester, 2011-12) and I am applying for another exchange opportunity in Taiwan. The school is so helpful to smooth administrative processes like credit transfer, course approval request, communication with host institutions, etc. All the convenience offered by the school shows its passion in sending us out to gain international experience. I can feel this from our staff and the sophisticated yet flexible exchange system. All in all, HKUST is an excellent educator. My experience in UST proves I have made the right choice two years ago.

Hey there, this is Jeff. I can't believe I am in my final year in HKUST already, well, some said that time flies when you are having fun; in my case, it's more than just "fun". Since, I always wanted to study engineering, it seems logical for me to pursue my higher education in the UK, the home country of engineering; but I came back to Hong Kong and choose HKUST. It was the best choice I could have made, because I always wanted to study Chemical Engineering and HKUST is the only university in Hong Kong which offers such program.

I have only heard rumours about how academic orientated HKUST is after the first semester began. Was I worried? Of course, I always believe that as well as academic, the actual "university life" is very important! I didn't know whether I will have the chance to experience my "university life"; but it turned out that the academic side is manageable together with the tones of activities I got involved (such as social enterprise, students' society, student development program and research etc.).

One of the many activities I joined is the School of Engineering Student Ambassador program. Unlike other roles, I feel that being a Student Ambassador give me a sense of feeling that I am making a contribution and impact on the others; giving advice and sharing my experience with students, telling the public what engineering really is and how it affects our daily lives. This experience is surely one of the most meaningful experiences I have had in UST.

Although I would love to tell you more about my experience, I will stop here and if you have any question, please feel free to contact!
